TONNE**

April 23, 2018 - Red Eagle Mining Corporation (TSX: R, BVL: R, OTCQX: RDEMF) is pleased to announce results from ongoing underground delineation drilling at the San Ramon Gold Mine, Santa Rosa Gold Project, Antioquia, Colombia. Results from 19 additional underground delineation holes have been received (SRDU-0232 to SRDU-0250). Results continue to return intercepts with grades significantly higher than the reserve grade of 5.2 g/t Au with highlights including intersections:

21,688 metres of underground diamond drilling in 250 stope delineation holes have been completed. The results from 231 underground stope delineation holes (SRDU-0001 to SRDU-0231) were previously announced. For complete drilling results, please see [Table 1](#) - Drill Hole Intersections, [Table 2](#) - Drill Hole Specifications, [Figure 1](#) - Long Section, [Figure 2](#) and [Figure 3](#) - Cross sections. Drill assays were composited by length-weighted averaging into intersections using a 2 g/t Au cut-off grade. For photographs of the drill core see Red Eagle Mining's photostream on [flickr](#).

Quality Assurance and Quality Control

All technical information for Red Eagle Mining's Santa Rosa Gold Project is obtained and reported under formal quality assurance and quality control ("QA/QC") procedures and guidelines. Red Eagle Mining's procedures are designed to meet or exceed C.I.M. "Best Practices Guidelines" and National Instrument 43-101 standards of disclosure. QA/QC protocols for drill core sampling and assaying include the insertion and monitoring of appropriate reference materials (certified standards, blanks and duplicates) to validate the accuracy and precision of the assay results.

All drilling samples were collected with a diamond core drilling rig using approximately 0.5 metre sample intervals following industry standard practice. Activation Laboratories Ltd. prepared and assayed the samples at their laboratory in Medellin, Colombia. Fire Assay for Au (using a 50 gram sample) with an AAS finish was carried out routinely on all samples submitted. For all samples which returned initial Au fire assays of greater than 5 g/t, a second Fire Assay for Au was performed (also using a 50 gram sample) with a gravimetric finish.

The technical information contained in this news release has been reviewed and approved by Red Eagle Mining's Vice President Exploration, David G. Thomas P. Geo., who is a "Qualified Person" as defined under National Instrument 43-101.
