### ***Development and Construction of the San Ramon Gold Mine and Mill***

By mid-November 2016, the commissioning process had been completed by the EPCM contractor with minor modifications remaining to be completed by Red Eagle Mining. The processing facility has reached a steady operating throughput capability and has poured a nominal quantity of gold. Commercial production is expected in the first quarter of 2017 as production ramps up. Underground mining is progressing at an increasingly rapid rate as a result of the opening up of numerous ore development headings.

The construction of the San Ramon Gold Mine and Mill remained within budget and on schedule within the 14-month construction period to first gold in November 2016.

*Mine Highlights:*

- Mine operations have continued to adopt best practices in safety with many awareness programs in place and monitoring occurring on a continuous basis. The results have been demonstrated in the exceptional safety statistics to date;
- The main access and production declines have progressed to over 750 metres in length. Ore development is now focussed on stoping blocks on the 50 metre and 75 metre levels;
- Initially, low grade ore was used to commission the process plant. The current ore feed to the process plant is directly from resource ore from the ore development headings and stopes; and
- Mine staffing has reached planned levels of approximately 160 individuals.

*Mill Highlights:*

- All concrete pours, platework, steelwork, mechanical equipment installation, piping, electrical and instrumentation works are complete, and the construction contractor has achieved practical completion;
- Commissioning commenced during September and is expected to be completed in December. The processing facility has reached a steady operating throughput capability, with interruptions for stoppages for minor modifications, performance reconciliations and maintenance, which is typical with all similar start-ups;
- Phase 2 earthworks on the dry waste management facility is continuing. Downstream sediment pond embankment and seepage collection pond dyke construction have been completed. This on-going construction is not impeding the deposition of tailings into the facility; and
- Red Eagle Mining achieved its first gold pour in November 2016.

***Project Financing***

Based on Red Eagle Mining's projections and estimated construction progress made to date, the construction of Red Eagle Mining's San Ramon Gold Mine and Mill is expected to be funded through to full commercial production. Red Eagle Mining has a cash balance of approximately US \$11 million and estimates approximately US \$4 million of costs left to incur, as of October 31, 2016.

***Equity Financing***

In April 2016, a private placement for gross proceeds of \$11,281,476, consisting of 29,688,095 common shares at a price of \$0.38 per share, was completed. In July 2016, a second private placement for gross proceeds of \$9,223,638, consisting of 13,176,626 common shares at a price of \$0.70 per share, was completed. No warrants were issued in either private placement.

The net loss for the nine months ended September 30, 2016 was reduced compared to the nine months ended September 30, 2015 as Red Eagle Mining commenced capitalization of direct costs associated with the development of the San

Ramon Gold Mine and has a higher foreign exchange gain. Total assets and shareholders' equity increased in value as a result of the capitalization and the acquisition of a controlling interest in CB Gold Inc. The increase in total liabilities primarily relates to amounts outstanding on the construction credit facility.
